Orchestration of ML project containers using Kuberenetes

The objective of this lab is to introduce you to the fundamentals of orchestrating applications with Kubernetes. You will learn how to define, deploy, and manage containerized applications using Kubernetes manifests.

Lab Steps:

Step 1: Verify Kubernetes Cluster Ensure your Kubernetes cluster is up and running by checking the cluster nodes

```
PS D:\Desktop\stream> kubectl get nodes

NAME STATUS ROLES AGE VERSION
docker-desktop Ready control-plane 22m v1.27.2
```

Step 2: Define a Deployment using YAML manifest and apply the deployment to your cluster

```
→ deployment.yml

      # deployment.yaml
      apiVersion: apps/v1
      kind: Deployment
      metadata:
       name: ml-deployment
      spec:
        replicas: 3
        selector:
          matchLabels:
            app: ml-app
        template:
          metadata:
            labels:
               app: ml-app
          spec:
            containers:
             - name: ml-container
               image: your-ml-image:tag
 19
               ports:A
                 containerPort: 8080
```

MLOps CEITA(7A-4)

Apply the deployment:

```
PS D:\Desktop\stream> kubectl apply -f deployment.yaml deployment.apps/ml-deployment created
```

Step 3: Describe Deployment

```
PS D:\Desktop\stream> kubectl describe deployment ml-deployment
                       ml-deployment
Name:
Namespace:
                       default
                       Thu, 23 Nov 2023 18:58:29 +0530
CreationTimestamp:
Labels:
                       <none>
Annotations:
                       deployment.kubernetes.io/revision: 1
Selector:
                       app=ml-app
Replicas:
                       3 desired | 3 updated | 3 total | 0 available | 3 unavailable
                       RollingUpdate
StrategyType:
MinReadySeconds:
RollingUpdateStrategy: 25% max unavailable, 25% max surge
Pod Template:
 Labels: app=ml-app
 Containers:
  ml-container:
   Image:
                 your-ml-image:tag
   Port:
                 8080/TCP
                0/TCP
   Host Port:
   Environment: <none>
   Mounts:
                 <none>

  Type
  Available
                False
                        MinimumReplicasUnavailable
 Progressing
                        ReplicaSetUpdated
               True
OldReplicaSets: <none>
NewReplicaSet: ml-deployment-5fcc5656fc (3/3 replicas created)
Events:
  Type
          Reason
                            Age
                                  From
                                                         Message
 Normal ScalingReplicaSet 24s
                                  deployment-controller Scaled up replica set ml-deployment-5fcc5656fc to 3
```

Step 4: Expose Service

```
# service.yaml

1  # service.yaml

2  apiVersion: v1

3  kind: Service

4  metadata:
5  name: ml-service
6  spec:
7  selector:
8  app: ml-app
9  ports:
10  - protocol: TCP
11  port: 80
12  targetPort: 8080
13  type: LoadBalancer
```

20012531030 HARSHIL SAVAJ

MLOps CEITA(7A-4)

Step 5: Access the Service

```
PS D:\Desktop\stream> kubectl apply -f service.yaml service/ml-service created
```

Step 6: Scale Deployment

PS D:\Desktop\stream> kubectl scale deployment ml-deployment --replicas=5 deployment.apps/ml-deployment scaled

Step 7: Update Deployment

```
deployment-updated.yaml
  2 apiVersion: apps/v1
     kind: Deployment
     metadata:
     name: ml-deployment
     spec:
      replicas: 3
       selector:
 8
        matchLabels:
       app: ml-app
       template:
         metadata:
           labels:
            app: ml-app
        spec:
          containers:
           - name: ml-container
            image: your-updated-ml-image:tag
             ports:
             - containerPort: 8080
```

Step 8: Rollout Status

```
PS D:\Desktop\stream> kubectl rollout status deployment ml-deployment
Waiting for deployment "ml-deployment" rollout to finish: 1 out of 3 new replicas have been updated...
```

Step 9: Rollback Deployment

PS D:\Desktop\stream> kubectl rollout undo deployment ml-deployment deployment.apps/ml-deployment rolled back

Step 10: Delete Resources

```
PS D:\Desktop\stream> kubectl delete deployment ml-deployment deployment.apps "ml-deployment" deleted
PS D:\Desktop\stream> kubectl delete service ml-service service "ml-service" deleted
```
